GAI France

GAI MLE, an isobaric bottling machine using UNICA electro-pneumatic valves.

The machine's UNICA electro-pneumatic valves combine very precise volume filling - irrespective of the product to be bottled (still and sparkling wines, beers) - with reduced oxygen intake (patented in 2012).

The UNICA electro-pneumatic valves ensure effective reduction of dissolved oxygen intake during bottling, as a result of the use of one or two evacuation cycles.

In limiting oxygen intake the machine is able to improve the consistency of wines across a single batch, both during the bottling process and under storage.

The operating principle is shown in a remarkable film, the recipient of 1st prize in the Cœnovidéo technical film category.
